

# LENOX

Thode Knife & Saw now stock and manufacture the metal cutting range of Lenox Bandsaws

**“Using the correct bandsaw blade can extend the life, improve cut quality and reduce costs”**

Lenox is available in a wide range of tooth designs and widths to suit many applications. Bi-Metal, Carbon Steels, Carbide Grit Edge and Carbide Tipped are amongst the ranges. Whether you are using manual or automatic machines, Thode & Lenox will have sawing options for you

## Contestor GT

Lenox Contestor GT is a High Performance Bi-Metal blade. To be used when tool life & accuracy is most important

## RX+

Lenox RX+ is engineered to cut structurals, tubing & bundles. Designed for long life and extreme durability. Available in extra heavy set to prevent blade pinching

## Aromour CT

Carbide Tipped blades designed for extreme cutting rates. Aluminium, Titanium and Nitrogen combine to form a coating that is hard & tough, protecting each tooth from heat & wear

## “LUBRICANTS PROLONG SAW BLADE LIFE”

Most sawing applications require at least some lubrication. We offer the range of Lenox coolants and Saw Lubricants including the Lenox Lube Tube, an extreme pressure Dry Stick lubricant. We can also supply direct displacement Lube Systems

## “RANCID COOLANT COSTS THE METAL WORKING INDUSTRY MILLIONS”

If you have chosen a synthetic coolant, proper fluid ratio is essential to maximise performance. Regular maintenance and investment in a refractometer is your best defence against “Monday Morning Stink” from rancid coolant
